PROFESSIONAL SUMMARY

Frontend and UI/UX developer (BCA, 2026) who designs and ships responsive, accessible, production-grade interfaces with React, TypeScript, and Tailwind CSS. Delivered 4 live products including an offline-first PWA sold to a restaurant client, cut bundle size by 70%, and built data-rich dashboards for 2,000+ listings. Strong in design systems, component libraries, animation, and performance optimisation.

TECHNICAL SKILLS

Frontend: React 18/19, TypeScript, JavaScript (ES2020+), HTML5, CSS3, Tailwind CSS v4, Vite, React Router, State Management, REST API Integration

UI/UX & Design: Figma, Responsive Design, Design Systems, Radix UI, Component Libraries, Accessibility, Wireframing & Prototyping, Mobile-First UI, Recharts (Data Visualisation)

Animation & PWA: GSAP, PixiJS, Progressive Web Apps, Service Workers, IndexedDB, Offline-First, Performance Optimisation, Code Splitting

Backend & Data (Working): Node.js, Express.js, Supabase, PostgreSQL, MongoDB, Redis, JWT Authentication

Tools & Testing: Git, GitHub, GitHub Actions (CI/CD), Playwright (E2E), Postman, Vercel, Cloudflare Pages, Docker, VS Code, FIGMA

EXPERIENCE

Freelance Frontend Developer & UI/UX Designer

2026 – Present

- Delivered a production **QR-first cafe ordering PWA** based on the Food-Mahal-OMS repository and sold it to a restaurant; designed mobile-first customer flows and admin UX across **6,500+ lines of typed TypeScript**, using Figma for wireframing, prototyping, and interface iteration
- Shipped the cafe UI with **React 19, Tailwind CSS 4, React Router, Supabase, IndexedDB, and Service Worker caching**; covered menu, orders, categories, analytics, table sessions, feedback, loading/error/empty states, and protected admin routes
- Delivered an **offline-first QR scanner for a snack shop** (BBM); handled responsive interaction design, scan/state flows, offline-ready UI states, client feedback, deployment, and production refinement from prototype to release
- Currently building **FrameVault**, a video-production platform with **8 role-based workspaces across 22+ views**; use Figma, React 19, TypeScript, and Tailwind CSS 4 to translate structured workflows into reusable production components

PROJECTS

Food Mahal OMS – QR-First Cafe Ordering PWA (Client Project)

Live: Live | GitHub

React 19 • TypeScript • Tailwind CSS 4 • React Router • Supabase • PWA • IndexedDB • Service Worker

- Designed and shipped a **mobile-first QR ordering UX** and responsive admin dashboard across menu, orders, categories, analytics, table sessions, and feedback in **6,500+ lines of typed TypeScript**; product sold to a restaurant client
- Built a reusable **design system / component language** with responsive layouts, dark/light states, accessible controls, protected admin routes, integer-based INR money input, and consistent empty/error/loading states
- Engineered an **offline-first PWA** using Service Worker + IndexedDB with a **24-hour freshness threshold** and stale-data UI indicators; customer order status refreshes every **3 seconds** for near-real-time feedback
- Integrated Supabase Auth, PostgreSQL RLS, **16 migrations and 28 policies** to enforce admin-only mutations and customer-safe public reads; security audit closed with **0 critical findings**; AI menu-assistant UI used strict JSON-schema validation and bounded **5 req/min, 50/day, 300-token** usage

BroKar – AI-Powered Indian Real Estate Platform

Live: Live | GitHub

React 18 • TypeScript • Tailwind CSS • Radix UI • Recharts • Vite • Playwright • GitHub Actions • Vercel

- Built a responsive property-search experience over **2,000+ listings across 15 cities** with **48 reusable Radix UI components**, URL-driven filters, property detail states, sorting, pagination, and AI-assisted discovery
- Designed data-dense forecast views with **Recharts** for 1–10 year XGBoost/LSTM predictions; surfaced price, appreciation, confidence, and property metadata through responsive cards and charts
- Applied mobile-first layout, accessible primitives, loading/empty/error states, reusable form controls, and component-level styling with Tailwind CSS to keep search and detail flows consistent across breakpoints
- Reduced frontend bundle size by **70%** using Vite code splitting and nginx gzip; implemented a **3-job GitHub Actions CI/CD pipeline** with Playwright E2E tests and Vercel deployment

Kiku – Mood-Aware Food Discovery Platform

Live: Live | GitHub

React 18 • TypeScript • Vite • MediaPipe • Node.js • Express 5 • MongoDB • Redis • BullMQ

- Designed a responsive food-discovery experience around mood, cravings, dietary preferences, saved items, recipes, restaurant discovery, and **same-dish Swiggy/Zomato comparison** with clear compare/cook/order actions
- Built reusable React/Vite interaction patterns for **38 backend endpoints**, personalized recommendation states, PIN-based discovery, filters, recipe flows, saved-item feedback, and loading/error/empty states
- Integrated **MediaPipe on-device mood scanning** with explicit camera activation and no raw frame upload; translated local expression signals into explainable recommendation context without exposing camera data
- Optimized the frontend for production flows with API-backed caching, **24-hour fresh / 7-day stale** comparison data, and deterministic fallback paths; validated the stack with **23 automated test files**

VIRTUAL INTERSHIPS & CERTIFICATION

Prompt Engineering for AI - Virtual Internship, AICTE × EduSkills | Grade: Outstanding

Mar 2026

Data Engineering - 8-Week Virtual Internship, AICTE × EduSkills (AWS Academy) | Grade: O (Outstanding)

Apr – Jun 2026

NPTEL, IIT Madras - Entrepreneurship | Elite Certificate, 88%, Course Topper

Jul – Oct 2024

EDUCATION

Bachelor of Computer Applications (BCA) - Galgotias University, Gautam Buddha Nagar

2023 – 2026

GPA: 7.98

Class XII (CBSE) - Range Hills Public School, Aligarh | 2021 | 8.8
